

CMPE 322 PROJECT 1

Elif Çalışkan

2016400183

Problem description:

Implementing a preemptive priority scheduler in C/C++ language.

The platform I used to develop:

First, I used Clion, then I made the adjustments in Ubuntu. After that, I used G++ compiler tools for testing the code.

How to run the program:

g++ main.cpp or

g++ main.cpp -std=c++11 -o executableName

a.out or executableName creates output.txt when they run.
